PREFACE

HOW CINAHL™ BEGAN

Although nursing journal publishing began around the turn of the century, until 1961 there was no easy way to identify current articles in the growing number of journals in the field. Three hospital librarians who were indexing the literature for their own nursing staffs decided to pool their efforts to publish one standardized publication. In 1961, Mildred Grandbois, library director of the Glendale Adventist Medical Center, Glendale, California, published the first edition of the Cumulative Index to Nursing Literature, containing indexing for 1956-1960 from 16 journals.

CINAHLTM TODAY

The Cumulative Index to Nursing & Allied Health Literature provides authoritative coverage of the literature in nursing and allied health. Over 570 journals are regularly reviewed and indexed for inclusion in each year's five bimonthly issues and cumulative bound volume. Virtually all English-language nursing journals are indexed along with publications of the American Nurses' Association and the National League for Nursing. Primary journals are indexed from thirteen allied health fields:

- · Cardiopulmonary Technology
- Emergency Services
- Health Education
- The Medical Assistant
- · Medical/Laboratory Technology
- Medical Records/Information Management
- · Occupational Therapy

- · Physical Therapy
- · The Physician's Assistant
- Radiologic Technology
- · Respiratory Therapy
- · Social Service in Health Care
- Surgical Technology

Selected journals are also indexed in the areas of consumer health, biomedicine, and health sciences librarianship. In addition, CINAHL indexes books, nursing dissertations, standards of professional practice, and selected conference proceedings.

All materials are indexed according to CINAHL's Subject Heading List, which is designed specifically for nursing and allied health. Each year terms are added as needed to provide immediate and direct access to indexed materials. The structure of this thesaurus is based on the widely used National Library of Medicine's Medical Subject Headings (MeSH) but tailored to meet the needs of nursing and allied health professionals.

ELECTRONIC INDEXES

CINAHL is available online via BRS, Data-Star, DIALOG, and US HealthLink; on CD-ROM through CD PLUS, and SilverPlatter; and on magnetic tape from CINAHL Information Systems. The electronic database covers the period 1983 to date, and includes abstracts from more than 210 regularly indexed journals, nursing dissertations, educational software, and audiovisuals.

CRITERIA for SELECTION of MATERIALS

JOURNALS

Articles from nursing, allied health, biomedical, and consumer health journals that meet the following criteria:

- Original and substantive articles of interest to nurses and allied health professionals.
- · Editorials of national and international scope and interest.
- Biographies and obituaries with substantive background materials.
- Reports about outstanding nurses and allied health professionals.
- · Letters to the editor when substantive in nature.
- · Selected abstracts from professional meetings.
- · Poetry, if considered pertinent.

MATERIALS not INDEXED

Types of materials not indexed:

- Information of dated or transient nature, e.g., news items, notices of meetings, elections, committee activities.
- · Financial reports, resolutions and bylaws.
- · Editorials of local interest.
- · Promotional articles/advertorial.
- · Book reviews.

BOOKS/PAMPHLETS/PROCEEDINGS

- Selected books of interest to nurses and allied health professionals.
- · Selected book chapters.
- · American Hospital Association, Division of Nursing
- · American Nurses' Association
- ICN Publications
- · National League for Nursing
- United States Department of Health and Human Services, Division of Nursing
- · World Health Organization
- Proceedings of the North American Nursing Diagnosis Association (NANDA).
- Selected conference proceedings considered substantive in nature and appropriate in scope.
- · Standards of practice for nursing specialties.

DISSERTATIONS

Dissertations written by nurses or covering nursing topics which are submitted to UMI (University Microfilms International) for inclusion in Dissertation Abstracts International.

SEARCHING CINAHL™ EFFECTIVELY

NEW FORMAT

The Subject Section now contains citations from journals, books, pamphlets and dissertations in one place. Under each subject heading, journal citations sort first. Book, pamphlet, and dissertation citations follow, sorted by the main title in bold type. Non-journal citations will have the publication type noted in brackets.

Pamphlet citations are structured somewhat differently than in past volumes of CINAHL. When indexed at the chapter level, pamphlet citations will first list the chapter/article title with the word "IN:" followed by the main title and editor in bold type. Proceedings, if in book form, will also be indexed at the chapter level and will appear in a similar format.

The *Author Section* is sorted by author and the citation can refer to either an article, chapter, pamphlet, book, or dissertation. Non-journal citations will have the publication type noted in brackets.

SUBJECT SEARCHING

The CINAHL Subject Headings (or "yellow pages") is the key to effective searching. It includes all valid subject headings and cross references arranged in alphabetic, tree structure, and permuted formats. The first step in every subject search should be to identify the most appropriate heading(s) from this list.

Permuted List

Start with the *Permuted List* to locate an appropriate subject heading. Every significant word appearing in a CINAHL heading or cross reference is listed here alphabetically. For example, when you look up Cancer, a cross reference "see NEOPLASMS" tells you that articles on this topic appear under the valid heading NEOPLASMS, not under Cancer.

Alphabetic Section

Once you've identified a valid heading, look it up in the Alphabetic Section to make sure it is the most appropriate heading for your search. Scope notes and indexing notes clarify the usage of many subject headings. "See also" references suggest additional related headings that might be useful. When you look up NEOPLASMS, you will find an indexing note to the effect that ANTINEOPLASTIC AGENTS is often used together with NEOPLASMS—drug therapy. A "see also" PRECANCEROUS CONDITIONS reminds you to consider that heading as well. The tree numbers listed under each subject heading lead you to the term's location in the Tree Structures where related terms can be found.

Tree Structures

Careful use of the *Tree Structures* can also help you to select the most appropriate heading(s). The *Tree Structures* list all CINAHL headings in a subject hierarchy which shows the relationship between broader and narrower terms. Alphanumeric codes ("tree numbers") from the *Alphabetic List* guide you to the appropriate tree (C4 for NEOPLASMS). Browse the tree to locate the most specific heading(s) related to your topic. This is important since the indexers always assign the most specific subject headings available. If you are looking for articles on BREAST NEOPLASMS, you must search under that heading; relevant articles will *not* appear also under the general term NEOPLASMS.

Searching the White Pages

Once you have identified all of the appropriate subject headings for your search, it is time to turn to the white pages of the index. Journal articles are listed first with pamphlets, books and dissertations following. In each case, subject headings appear in alphabetical order with appropriate citations underneath. Citations are further divided by subheadings (e.g., psychosocial factors, therapy, and trends) to group together related articles. Start searching in the most current bimonthlies and work backwards to earlier volumes. Be sure to check the list of subject headings for each year searched to identify the terms valid in that year. The following diagrams explain bibliographic citations:

Interpreting Citations

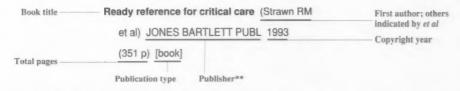

Bibliographic citations provide the information needed to locate materials. To find journal articles in a library, make note of the article title, journal title, publication date, volume number, issue number (if any), and pages. To find pamphlets and books, you will need to know the pamphlet or book title, author, publisher, and publication date (include the pamphlet number if listed). And for dissertations, keep a record of the title, author, school attended, and date. The UMI number facilitates dissertation ordering.

Special features of CINAHL's bibliographic citations help you to judge the value of the materials indexed. Explanatory phrases are added to clarify vague titles. Document types indicate the form of an item (e.g., editorial, research) or the presence of some special data (e.g., statistics, care plans). The number of references and suggested readings are also included in the citation.

AUTHOR SEARCHING

Authors for journal articles, pamphlets, books, and dissertations are listed alphabetically in the white pages. The maximum number of authors listed for each citation is three. Additional authors are indicated by et al. The complete bibliographic citation appears only under the name of the

first author, with "see" references for the second and third authors. Persons about whom biographies or obituaries are written may also be found in the author section. They are listed alphabetically and appear within parentheses. For example, locate recent articles under "(Nightingale F)".

ADVANCED PRACTICE NURSES

Nurses who fulfill roles beyond those that require basic educational preparation are practicing at an advanced level. These include nurse practitioners, nurse midwives, nurse anesthetists, and clinical specialists. Nurses in advanced practice include in their range of activities physical assessment, health promotion, prevention of disease, and nursing and medical management of disease. They are usually prepared with a masters' degree in nursing and may be in independent practice or employed by a physician, HMO or hospital.

ANGINA PECTORIS

The symptom of paroxysmal pain consequent to myocardial ischemia. Usually of distinctive character, location, and radiation, and provoked by a transient stressful situation during which the oxygen requirements of the myocardium exceed the capacity of the coronary circulation to supply it.

ANGIOGRAPHY, DIGITAL SUBTRACTION

- A method of delineating blood vessels by subtracting a tissue background image from an image of tissue plus intravascular contrast material that attenuates the x-ray photons. The background image is determined from a digitized image taken a few moments before injection of the contrast material. The resulting angiogram is a high-contrast image of the vessel. This subtraction technique allows extraction of a high-intensity signal from the superimposed background information. The image is thus the result of the differential absorption of x-rays by different tissues.

ANGIOPLASTY, LASER

A technique utilizing a laser coupled to a catheter which is used in the dilatation of occluded blood vessels. It includes laser thermal angioplasty where the laser energy heats up a metal tip and direct laser angioplasty where the laser energy directly ablates the occlusion. When laser angioplasty is performed in combination with balloon angioplasty, it is called laser-assisted balloon angioplasty (ANGIOPLASTY, BALLOON, LASER-ASSISTED).
